

FEDERSEAL – TECHNICAL DATA SHEET

Description

A blend of paraffin waxes and hydrocarbon solvents designed to produce a wax seal on cold immersion paint strippers.

The Control of Substances Hazardous to Health Regulations 2002 (COSHH)

For a Safety Data Sheet on this product please contact Confederate Chemicals by telephone, or by e-mail at lab@confederatechemicals.co.uk

Instructions for use

Remove the required amount of FEDERSEAL from the pail and warm carefully in a suitable container.

Pour onto the surface of the paint stripper.

Do not try to melt the product on the surface of the stripper or close to the tank. Some cold immersion strippers are inflammable.

As a guide for the initial make up use 1 x 20kg pail for every 1000 litres of tank capacity.

For tall tanks with a small surface area reduce this to 10 kg per 1000 litres.

Safety

FEDERSEAL contains a chlorinated solvent. Use in a confined space should be avoided when melting and pouring FEDERSEAL.
